PROFESSIONAL SUMMARY

Cyber Security master's student with hands-on experience in vulnerability assessment, triage, and remediation across cloud-hosted (AWS) applications. Skilled in identifying and prioritising DAST/SCA findings from tools such as Nmap, Nikto, WPScan, and Nessus, and driving fixes back into secure configurations. Familiar with OWASP Top 10, secure SDLC, and compliance concepts.

TECHNICAL SKILLS

Security Tools: Nmap, Nikto, WPScan, Nessus, Burp Suite (DAST), Metasploit, Wireshark, Hydra, John the Ripper, Kali Linux
Programming: Python, Bash, SQL, C++
Security Concepts: Vulnerability Assessment & Triage, DAST, SCA, Application Security, Penetration Testing, OWASP Top 10, Secure SDLC, Threat Modelling, CVE/CVSS Analysis, Authentication, Cryptography, Security Automation, Compliance & Privacy
Frameworks & Standards: MITRE ATT&CK, NIST Cybersecurity Framework, ISO 27001
Cloud & Monitoring: AWS (EC2, Security Groups, KMS, CloudWatch, SNS, GuardDuty, CloudTrail), Datadog, HTTP Security Headers, TLS/Certbot
Systems & Networking: Linux, Windows, VMware, VirtualBox, TCP/IP, DNS, HTTP/HTTPS, SSH, Active Directory
Soft Skills: Communication, Teamwork, Problem Solving, Analytical Thinking, Technical Documentation

PROJECTS & PRACTICAL LABS

Penetration Testing Labs – Hack The Box & TryHackMe Ongoing
Hack The Box | TryHackMe

- Completed hands-on penetration testing labs across HTB and THM platforms, compromising intentionally vulnerable Linux and Windows machines by chaining real-world exploitation techniques including privilege escalation, service enumeration, and credential attacks.
- Practiced the full offensive security lifecycle — reconnaissance, scanning, exploitation, and post-exploitation — using Nmap, Metasploit, Burp Suite, Hydra, and custom Python scripts.
- Completed dedicated learning paths covering network security, web application attacks, Active Directory exploitation, and CTF-style challenges, staying current with emerging attack techniques and CVEs.

Security Hardening of Open-Source Web Applications
Personal Security Research Project

- Audited multiple open-source GitHub projects to identify misconfigurations, exposed sensitive data, weak input validation, and vulnerable dependencies (SCA).
- Applied security automation principles to build repeatable testing processes, reducing manual assessment effort and enabling continuous improvement.
- Implemented and validated remediations to reduce attack surface, improving overall security posture through iterative testing.

Cloud Security Hardening & Vulnerability Assessment – AWS 2026
MSc Cloud Architecture & Security Module Project

- Deployed and hardened a defence-in-depth AWS architecture (EC2, Security Groups, KMS, CloudWatch, SNS) hosting a production-style Apache/PHP/WordPress/MariaDB application secured end-to-end with TLS/Certbot.
- Ran dynamic application security testing (DAST) with Nmap, Nikto, WPScan, Nessus, and Wireshark; triaged and prioritised findings by severity, then remediated version disclosure, missing HTTP security headers, HTTP TRACE, and directory-listing issues.
- Built continuous monitoring and alerting (CloudWatch alarms, SNS, Datadog, GuardDuty) and validated remediations through iterative retesting, reducing the final scan to zero Critical/High/Medium/Low findings.

EDUCATION

MSc in Cyber Security Jan 2026 – Jan 2027
National College of Ireland, Dublin, Ireland

Bachelor of Technology in Computer Engineering Sep 2021 – May 2025
Indus University, Ahmedabad, India – First Class with Distinction

CERTIFICATIONS

Ethical Hacking & Cyber Security – Tutedude
Python 101 for Hackers – TCM Security
ISRO Space Science & Technology Awareness Training – ISRO
Cyber Security Course – Indus University
Artificial Intelligence Fundamentals – Indus University
